The capacitive type sensors are linear and are capable of measuring relative moisture from 0 to 100%. As the moisture in the atmosphere changes its permittivity, a simple Capacitive RH Sensor can be made from an air-filled capacitor. However, air as a dielectric is not viable for practical applications.

Capacitive Sensor and Transducer and Its Applications

Capacitive sensing is becoming a popular technology to replace optical detection methods and mechanical designs for applications like proximity/gesture detection, material analysis, and liquid level sensing.

AN2934 Capacitive
Touch Sensor Design

The process for designing products that use touch controls is a complex process with many decisions to be made, such as what materials will be used in their construction and how the mechanical and electrical requirements will be met. The key to this process is the
