utilize. An opening range breakout (ORB) is a trade taken at a predetermined amount above or below the opening range. When the predetermined amount (the "stretch") is computed, a buy stop is placed that amount above the high of the opening range and a sell stop is placed the same amount below the low of the opening range.

Opening Range Breakout (ORB) Strategy Guide

The opening range is the high and low points of the RTH session. For index futures there was a tradition for marking the high and low points during the first 30 minutes. Following this time window, one would take long positions above the opening range and

range breakout (ORB)
is popular within the
trading community.

The premise of it is
very simple: what
happens during the
first 15 minutes (or
first 30 minutes) of a
stock's opening can be
predictive of the price
movements expected
for the day. A range is
calculated for the first
timeframe and then
that range is added to
the high and low prices
within the first

hour OR first half-hour
of the trading day is
the most volatile.

Bears and bulls are
battling it out in the
stock market, trying to
show you who's going
to be the boss for the
day. This volatility
creates a price-range
you can trade from.
