Density of potassium hydroxide - Steffen's Chemistry Pages

Density. What we are actually comparing is the mass per unit volume, that is, the density. In order to determine these densities, we might weigh a cubic centimeter of each syrup. If the heavy syrup weighed 1.30 g and the light 1.15 g, we could describe the density of heavy syrup as 1.30 g cm -3 and that of light syrup as 1.15 g cm -3. (Note that the negative exponent in the units cubic ...
